SUBJECT: Review of Operating Instructions for the Briefing Print
Enlarger, No. 1-023-E-001

1. The preliminary manual of operating instructions for the BPE have been reviewed and found to be complete and comprehensive. We believe that this manual provides adequate instructions for installation, environment, operation and maintenance of this equipment.
2. The following apparent discrepancies are noted:
 - a. The power requirements listed in the Data Sheet and para. 1.2.4 do not agree.
 - b. Section 1, 1.1, so much as pertains to the 3x to 60x range should be changed to show the total capability of the BPE with a full complement of lenses.
 - c. 1.2.1. Environment. Believe that the BPE should be installed in a clean area incorporating positive pressure, dust free environmental control.
 - d. 1.2.3.1. What is the overhead clearance required after the easel is removed?
 - e. 1.2.4. Is the power receptacle and box in lieu of the normal disconnect switch or in addition to?
 - f. 1.3.3.6. Will the X & Y controls and display accommodate the changes in the frame/edge content of the on coming systems? The 4B system does not include fiducials for reference to the universal grid. Maybe the follow-on systems won't either. Maybe an addition could include a reference to any Xo-Yo point as well as the X-Y fiducial.
